DWP Containment Tanks

Designed for economy, the **DWP** series containment tanks use standard open top tanks and make them double wall with our unique U-Basin overflow. The **DWP** saves time and freight, having the primary open for maintenance allows us to consolidate your shipment and save you in freight.

"DW" Containment Tanks

"GTP's" unique design, double containment tank line, features, not one but two industry exclusives;

- 1) True **150%** containment
- 2) Visual/level leak detection port on the overflow basin

Then we added a mixer pad and inlayed pump mount with suction tube containment just for kicks. Our tanks are currently available in 18, 35, 65, 120, 160 & 220 gallon primary tank capacities. Tanks come standard with one 2" bung fitting on primary tank and a vented, threaded manway.

Spill Pallets

GTP's single & dual drum spill pallets incorporate a custom "**X**" designed to support 4 point stands without having to put them to the bottom of the basin, where the chemical collects. The addition of grates and epoxy coated restraints can complete your spill pallet needs.
