Moto-G Valves

"MGV" Moto-G valves are rugged and reliable full port motorized ball valve at an economical price. Available from 1/2" to 2" in brass, stainless and PVC. The standard capacitor valve acts like a solenoid. Power to open, charge the capacitor and remove power. The capacitor closes the valve.

"PTC" or "Power-To-Close" MGV valves are available for short cycle applications where tight control windows need to be met.

Moto-G "X" Valves

The next generation in reliable valves is our "MGV-X" valve. This durable/economical valve is power to close, but can also tell you when it is fully open or fully close. The visual indicator gives that assurance at a glance and when wired to your smart controller, can be verified.

Coupled with **GTPConnect™** you can remotely know if the valve is closed and get an alarm when it has been open to long.

"MGV-X" valve(s) can be ordered with a high temp mounting bracket option, allowing 266 F service.
